1-Topologia de la red:

| Dispositivo | Interf | IPV4 | MÁSCARA | GATEWAY |
|-------------|--------|------------|---------|--------------|
| | ace | | | |
| SERVIDO | e0/2 | 10.211.127 | /24 | 10.211.127.1 |
| RPROXY | | .5 | | |
| Maquinaub | e0/3 | 192.168.21 | /24 | 192.168.211. |
| untu | | 1.2 | | 1 |
| MaquinaWi | e0/1 | 172.31.211 | /24 | 172.31.211.1 |
| ndows | | .3 | | |
| NAT | e0/0 | DHCP | /24 | |

2-Configuración del router:

```
R1(config)#do sh ip int br
                         IP-Address
                                     OK? Method Status
                                                                        Protocol
 Interface
Ethernet0/0
                         192.168.112.118 YES DHCP
                                                                        up
Ethernet0/1
                         172.31.211.1 YES NVRAM up
                                                                        up
                         10.211.127.1 YES NVRAM up
Ethernet0/2
                                                                        up
                         192.168.211.1 YES NVRAM up
Ethernet0/3
                                                                        up
```

```
interface Ethernet0/0
ip address dhcp
ip nat outside
ip virtual-reassembly in
